UNIVERSITY OF CAMBRIDGE
DEPARTMENT OF ENGINEERING

4TH YEAR PROJECT HAZARD ASSESSMENT FORM

Project Code: F-ret26-3	**Project Location**: Remote
Student Name: Xiancheng Meng	**Student Email**: xm272@cam.ac.uk
Supervisor Name: Rich Turner	**Supervisor Email**: ret26@cam.ac.uk

Brief Description of Project:

This project investigates the sensitivity of and how robust AI-basd weather forecasting models respond to adversarial perturbations (deliberately chosen changes to the input data that cause the model to make significantly worse or misleading forecasts). More specifically, it will focus on general robusenss as well as adversarial vulnerability.

Hazard identification (*the following examples are not an exhaustive list*):

Are there any hazards which are likely to be encountered during the project? **YES** ☑ **NO** ☐ **(Tick box)**

If YES then please provide further details under the headings below.

Electrical: (e.g. electric shock, equipment operating at voltages >1000v, working on exposed circuits with voltages >50v etc. **NOTE** If you are working with an item either **self-built, or modified**, in excess of 25 Watts, 25 Volts or 1 Amp a risk assessment must be completed to outline the control measures in place to address the hazards. This applies to both AC and DC.)

N/A

Hazardous Substances: (e.g. harmful, toxic, flammable, sensitiser, carcinogenic, explosive, corrosive etc)

N/A

Gases: (e.g. asphyxiant, flammable, toxic, explosive, oxidising etc)

N/A

Laser: (e.g. class of laser etc)

N/A

Radiation: (e.g. ionising, non-ionising, electromagnetic fields, x-rays, ultraviolet (UV) etc)

N/A

Robotic: (e.g. errors - human/control, mechanical failures, power systems etc)

N/A

Mechanical: (e.g. power tools, workshop machinery, powered lifting, etc)

N/A

Biological: (e.g. biological hazards, genetically modified organisms (GMO) etc)

N/A

Physical: noise**,** vibration, high pressures, falling objects collapsing structures, sharp objects, high or low temperatures etc)

N/A

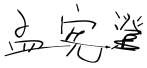

Other: (e.g. computer use, working at height, confined spaces, lone working, manual handling, slips, trips and falls, dust etc)

Prolonged computer use: Risks will be reduced by taking regular screen breaks, changing posture, and ensuring the workstation is ergonomically arranged.

Lone working: Working alone will be avoided where possible. When necessary, a designated contact will be informed of my location and expected finish time, with check-ins agreed in advance.

Identified risks should be discussed with your supervisor and a safe system of work agreed. A more in depth risk assessment may be required after initial review. Do not proceed until this form is signed off.

For any safety queries contact the Department of Engineering, Safety Office on 01223 (7)48501 or email safety-office@eng.cam.ac.uk, Room INO-18 (*Inglis Building Office Floor*).
